Bristol Area Down's Syndrome Support

Verbal Memory Research

Hi,

We have been contacted by Liz Smith, who is a PhD researcher at Bristol University working alongside Prof. Chris Jarrold. The research she is carrying out focuses on ways to enhance verbal memory for individuals with Down syndrome. Some of our group have participated in other studies this team has done.

They are currently carrying out a new project which involves a memory game on a laptop computer. During the task participants are presented with different sets of items. The aim is to discover which types of presentation individuals with Down syndrome are able to benefit from and what sorts of strategies may be in use. The current study takes around 45 minutes and can be carried out in the participants own home or at the University depending on personal preference.

They are seeking participants who have Down syndrome, from ages 8 up to age 30. They have asked us to invite you to join in. So if you are interested please contact Liz by email es6215@bristol.ac.uk or phone (07834721687) to let her know you are interested.

Andrew King
BADSS Secretary
